LinkedIn: <https://www.linkedin.com/in/ocheretko/>

GitHub: <https://github.com/Ocheretko88>

A reliable, delivery-focused full-stack developer with hands-on experience building and maintaining complex, multi-tenant web applications end to end — from user-facing single-page interfaces through to backend APIs, relational data models, and deployment. Comfortable owning features across the whole stack: implementing new functionality, integrating third-party services, hardening authentication and access control, optimising performance, and diagnosing and fixing bugs in live systems.

Experience

Senior Full-Stack Developer | Patternica

June 2023 – Present

Python & Angular (June 2025 - Present)

- Built a multi-tenant SaaS application from scratch using a split-database setup: one shared database for authentication and routing, and separate database instances for clients, linked via UUIDs.
- Handled token-based authentication using a cloud identity provider, writing custom frontend route guards and backend permission checks to secure API endpoints.
- Isolated user sessions by hosting the client-facing application on a separate subdomain, preventing authentication state collisions for users with administrative roles.
- Developed analytics dashboards to track ad impressions and financial metrics, including interactive 7-day trend graphs and custom time-zone-aware calculation logic.
- Built secure document workflows, including single-use token URLs for public access, webhooks for automated messaging, and dynamic HTML-to-PDF invoice generation.
- *Tech Stack:* Python (FastAPI), Angular 21, PrimeNG, Signals state management, PostgreSQL, SQLAlchemy, Alembic, Docker, Cloud Identity & Storage.

PHP & Angular (June 2023 - Present)

- Added production-ready features to web applications, handling backend and frontend logic.

- Optimized application performance by refactoring heavy database queries and minimizing API payloads.
- Migrated legacy customer applications to modern Laravel and Angular setups without data loss or system downtime.
- *Tech Stack:* PHP (Laravel), Angular, Nebular, PostgreSQL, MySQL.

GoLang & PHP Developer | Axon

November 2022 - May 2023

- Maintained backend REST APIs in PHP/Laravel and concurrent microservices in Go.
- Containerized local development and production setups using Docker to match environments across teams.
- Managed data persistence and wrote queries across both relational (PostgreSQL) and non-relational (MongoDB) databases.
- *Tech Stack:* Go, PHP 8, Laravel 8, Docker, PostgreSQL, MongoDB.

Trainee PHP Developer | Axon

March 2022 - November 2022

- Added core CRUD features and endpoints to existing RESTful API services.
- Debugged SQL queries and verified API behavior using DBeaver and Postman.
- *Tech Stack:* PHP 8, Laravel 8/9, PostgreSQL, Docker.

Previous Professional Experience

- **IT Copywriter & Content Manager** | Self-Employed & Technical Partner Firms (Technical documentation, user guides, blog posts)
- **Content Marketing Manager** | Software Development & Imaging Firms
- **English Language Teacher & Tutor** | Educational Institutions & Private Practice
- **Front Desk Receptionist** | Hospitality Sector

Education

Beetroot Academy

Back-End (PHP, Laravel) Developer
August 2021 - December 2021

National Dragomanov State Pedagogical University

Master's degree, Teaching English as a Second or Foreign Language

Uman State Pedagogical University

Bachelor's degree, Teaching English as a Second or Foreign Language

Certifications

Go: The Complete Developer's Guide (Golang)

Udemy

Issued Oct 2022

Credential: <https://www.udemy.com/certificate/UC-80a362c1-f87f-4d4f-b6c5-59e63f0b1e9d/>

Back-end (PHP, Laravel) Developer

Beetroot Academy

Issued in December 2021

Credential: <https://lms.beetroot.academy/diploma/ckrdibu7jsawj0724v4rjcixv>

CAE (Cambridge English: Advanced)

British Council Ukraine

Issued in March 2012
